

## FAQs about Zoom

### **Do I need to have a computer to download Zoom?**

No you do not need a computer. A tablet or a cell phone will also work, but there is less functionality in tablets and cell phones because it can be hard to use the “chat” function or “reaction” buttons without constantly having to move your phone or tablet. For this reason, computers or laptops are recommended for maximum ease of use.

### **Where do I download the app?**

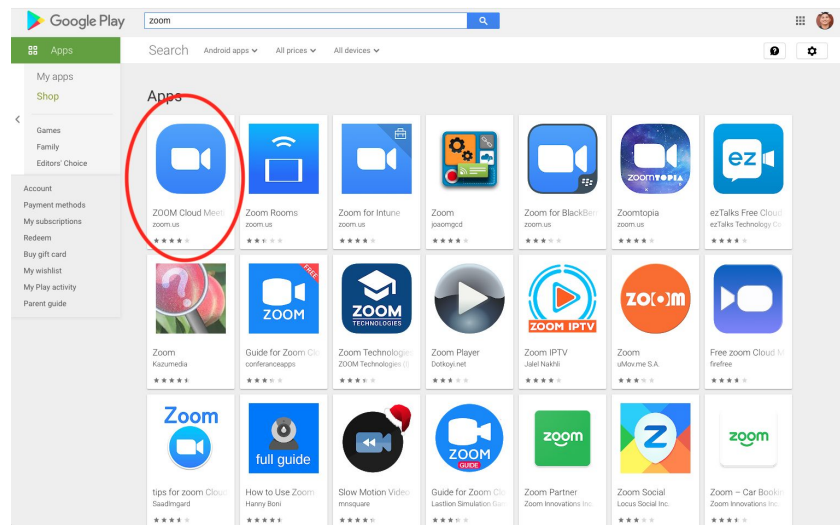

If you are on a computer go to [Zoom.us](https://zoom.us) and from there you can download the app for your computer.

If you are on a cell phone or tablet, you will need to download the correct app. The easiest thing to do is to go to <https://zoom.us/download> and scroll down the list until you find the kind of cell phone or tablet you have (Android, Windows, or Apple) and select that app, then follow the instructions for downloading the correct app.

In the **Apple App Store**, search for “Zoom.us” and then select the app that is called “Zoom Cloud Meetings” by Meet Happy (see picture below).

In the **Google Play store**, search for “Zoom” and download the app that is called “Zoom Cloud Meetings” by Zoom.us (see picture below).

### Can I use Zoom and not have my camera on?

You can use Zoom on your computer/phone/tablet without having your camera on, but this will limit the functionality of the app. In a larger group, being able to see each other is what makes the app most helpful in facilitating group conversation.

If you would still rather not have your camera on during the conversation, you can turn it off anytime by clicking on the “video” button on the bottom toolbar (see picture below).
